

(a) Inference Time and Performance for ETTh1, ETTh2, ETTm1, and ETTm2.

(b) Inference Time and Performance for Illness, Weather, Traffic, and Electricity.

Figure 8: Ablation methods consume less time for inference while providing better forecasting performance in most cases. The figure above shows the inference time and prediction accuracy of Time-LLM, OneFitsAll, and CALF on all the datasets, averaged across prediction lengths in MSE metric.
